

## **Contents**

Preface

### **CHAPTER 1**

Genetics and Embryology of the Mouse: Past, Present, and Future

Introduction

Mendelian Inheritance and Linkage: The Beginnings of Mouse Genetics

Origins of the Laboratory Mouse

Creation of Inbred Strains and Other Resources of Mouse Genetics

Origins of Developmental Genetics of the Mouse

A Heritage of Experimental Mouse Embryology

Manipulating the Mouse Genome

Systematic Mutagenesis and Phenotyping of the Mouse

### **CHAPTER 2**

Summary of Mouse Development

#### **INTRODUCTION**

Gestation and Embryo Staging

Oocyte Maturation and Ovulation

Spermatogenesis

Fertilization

Cleavage: Zygote to Eight-Cell Uncompacted Morula

Morula Compaction and Blastocyst Formation: The First Differentiation Events

Implantation in the Uterus

Trophectoderm and Its Derivatives

Formation of the Primitive Endoderm and Epiblast: The Second Round of Differentiation Events

The Epiblast Lineage

Epiblast Cells Divide Rapidly

The Epiblast Is a Pluripotent Tissue

The Pregastrula Embryo

Gastrulation: Formation of Mesoderm and Definitive Endoderm

Fate Maps of Early Postimplantation Embryos

Origin of the Germline

Generation of Regional Diversity in the Mesoderm

The Anterior Visceral Endoderm

The Node

The Tail Bud

Embryonic Turning

Somites and Their Derivatives

Lateral Plate and Intermediate Mesoderm and Their Derivatives

Sex Determination and Differentiation

Limb Formation

Neurulation: Formation of the Nervous System

Regional Diversification in the Neural Tube

Neural Crest

Formation of the Branchial Arches and the Pharyngeal Region

Gut Development

Extra-Embryonic Tissues

Visceral Endoderm

Parietal Endoderm

Differentiation of the Extra-Embryonic Mesoderm

The Structure and Function of the Chorioallantoic Placenta

The Adult Mouse

Mouse Coat Color and Its Genetics

Morphological and Behavioral Mutants

CHAPTER 3

A Mouse Colony for the Production of Transgenic and Chimeric Animals

INTRODUCTION

Pathogen Control in Experimental Mouse Colonies

Location of the Embryo Manipulation Laboratory

Establishing a Breeding Colony to Supply Embryo Donors<sup>[1]</sup> and Recipient Mice

Embryo Donors

Female Embryo Donor Mice for Pronuclear Microinjection

Female Embryo Donor Mice for Generation of ES Cell Chimeras

Fertile Stud Male Mice

Production of Embryo Donors

Embryo Recipients

Female Mice to Serve as Pseudopregnant Recipients

Sterile Male Mice to Induce Pseudopregnancy in Females

Production of Embryo Recipients

Pregnancy with Manipulated Embryos

Setting up Natural Matings

Inducing Superovulation

Strain Background

Age and Weight

Dose of Gonadotropins

Time of Administration of the Gonadotropins

Reproductive Performance of Stud Males

Animal Identification and Tissue Biopsies

Ear Punching or Notching

Toe Clipping

Tattooing

Ear Tags

Microchip Implants

Tail-Tip Excision

PROTOCOLS

1 Selecting Females in Estrus and Checking Plugs

2 Preparation of Gonadotropins and Superovulation

3 Intraperitoneal (i.p.) Injection

CHAPTER 4

Recovery and In Vitro Culture of Preimplantation Embryos

INTRODUCTION

Culture Media for Preimplantation Embryos

History

Two-Cell Block

Media for the Development from Zygotes to Blastocysts

Critical Components of Preimplantation Embryo Culture

Glucose

Amino Acids

Osmolarity

Oxygen Tension, CO<sub>2</sub>, pH, Light, and Temperature

Embryo Incubation Volume and the Role of Growth Factors

Effect of Embryo Culture on Gene Expression

Important Considerations for Successful In Vitro Embryo Culture

Medium Choice and Experimental Outcome

Reagents

Embryo Collection and Culture

Quality Control

Preparation of Embryo Culture Media

Pipettes for Embryo Handling

Collection of Preimplantation Embryos

PROTOCOLS

1 Preparation of Media for Embryo Handling and Culture

2 Setting Up Microdrops Culture

3 Making Embryo-Handling Pipettes from Hard Glass Capillaries

4 Preparation of Siliconized Pipettes

5 Opening the Abdominal Cavity and Locating Female Reproductive Organs

6 Collection of Zygotes and Removal of Cumulus Cells with Hyaluronidase

7 Collection of Two-Cell- to Morula-Stage Embryos

8 Collection of Blastocysts

## CHAPTER 5

Isolation, Culture, and Manipulation of Postimplantation Embryos

### INTRODUCTION

Isolating Postimplantation Embryos

Visualizing Early Embryo Implantation Sites

Isolating Postimplantation Embryos

Isolating Extra-Embryonic Membranes

Separating Postimplantation Germ Layers

Germ-Layer Explant Recombination Culture

Isolating Germ Cells from the Genital Ridge

Culturing Postimplantation Embryos

Preparing Embryos

Roller Culture of Postimplantation Embryos

Static Culture of Postimplantation Embryos

Static Culture of Postimplantation Embryos for Imaging

Introducing Nucleic Acids into Postimplantation Embryos by Electroporation

### PROTOCOLS

1 Visualizing Early Embryo Implantation Sites by Dye Injection

2 Isolating Postimplantation Embryos

3 Isolating Extra-Embryonic Membranes

4 Separating Postimplantation Germ Layers

5 Germ-Layer Explant Recombination Culture

6 Isolating Germ Cells from the Genital Ridge

7 Roller Culture of Postimplantation Embryos

8 Static Culture of Postimplantation Embryos

9 Static Culture of Postimplantation Embryos for Imaging

10 Electroporation of Postimplantation Embryos In Vitro

11 Electroporation of Postimplantation Embryos In Utero

## CHAPTER 6

Surgical Procedures

### INTRODUCTION

General Guidelines for Mouse Surgeries

Anesthesia and Analgesia

Anesthetics

Analgesics

Vasectomy

Embryo Transfer

Background

Role of Zona Pellucida in Embryo Transfer

Number of Embryos to Transfer

Recipient Females

Technical Aspects

Caesarean Section and Fostering

Tissue Transplantation

Tissue Biopsy

Ovariectomy and Castration

PROTOCOLS

1 Preparation of Tribromoethanol (Avertin)

2 Vasectomy of Mice

3 Oviduct Transfer of Mouse Embryos

4 Uterine Transfer of Mouse Embryos

5 Caesarean Section and Fostering of Mice

6 Transplantation of Adult or Embryonic Tissues under the Kidney Capsule of Mice

7 Subcutaneous Injection of Pluripotent Stem Cells in Mice

8 Tissue Biopsies in Mice

9 Blood Collection by Tail Bleeding in Mice

10 Ovariectomy of Mice

11 Castration of Mice

CHAPTER 7

Production of Transgenic Mice by Pronuclear Microinjection

INTRODUCTION

Applications of Transgenic Mouse Technology

Gene Transfer into the Mouse Genome by Pronuclear Microinjection

Designing Transgenes

Effects of Prokaryotic Vector Sequences

Length of DNA Construct

Coinjection of Two (or More) Transgenes

Distinguishing Expression of Transgenes and Endogenous Genes

Reporter Genes

Using Previously Identified Tissue-Specific Regulatory Sequences in Transgene Constructs

Expression of cDNAs and the Role of Introns in Transgene Expression  
Using “Housekeeping Gene” Promoters to Direct Ubiquitous Expression  
Factors Affecting the Efficiency of Gene Transfer  
General Considerations about Large DNA Constructs  
Isolation and Purification of DNA  
General Considerations  
Contaminants and Methods for Their Removal  
Commercially Available Kits for Plasmid Preparation and DNA Purification  
Preparation of Standard-Sized Plasmid DNA from Bacterial Cultures  
Digestion of Plasmid DNA for Release of Genetic Construct Fragment  
Gel Separation  
Recovery of DNA Fragments from Agarose Gels  
Fragment Purification  
Preparing DNA for Microinjection  
Determining and Maintaining High DNA Quality  
Determining Concentration of DNA for Injection  
Filtering the DNA Solution  
Storage of Prepared DNA  
Preparation of Technical Equipment and Zygotes  
Choice of Mouse Strain  
Preparation of Zygotes  
Making Holding Pipettes  
Making Injection Pipettes  
Microinjection Setup  
Microinjection  
Timing of Pronuclear Injection  
Microinjection of Mouse Zygotes  
After Microinjection  
Establishment and Maintenance of Transgenic Mouse Lines

## PROTOCOLS

- 1 Simple, Reliable Steps for DNA Fragment Isolation and Purification
- 2 Isolating BAC DNA from Bacterial Cultures Using the NucleoBond System
- 3 Purification of BAC DNA Prepared with the NucleoBond System
- 4 Large-Scale Preparation of Yeast Agarose Plugs to Isolate YAC DNA
- 5 Purification of YAC DNA Using a Two-Gel Electrophoresis Procedure
- 6 Purification of YAC DNA Using PFGE and Ultrafiltration
- 7 Preparing Injection Buffer for Standard-Sized DNA
- 8 Preparing Injection Buffer for BAC/YAC DNA

9 Preparation of In Vitro – Translated RNA for Microinjection

10 Making Holding Pipettes

11 Making Injection Pipettes

12 Microinjection Setup

13 Microinjection of Mouse Zygotes

14 Microinjection of RNA into Mouse Zygotes

15 Microinjecting Lentivirus into Mouse Embryos

16 Infecting Mouse Embryos by Coculturing with Lentivirus

DISCUSSION

Troubleshooting Guide for Microinjection of Mouse Zygotes and Production of Transgenic Mice

CHAPTER 8

Embryo-Derived Stem Cell Lines

INTRODUCTION

Derivation and Culture of Mouse Embryonic Stem Cells

Historic Background and New Developments

General Considerations for Optimal ES Cell Culture

Media and Reagents

Serum and Serum Replacement

Leukemia Inhibitory Factor (LIF)

Trypsin/EDTA

Feeder Cells

Primary Mouse Embryonic Fibroblasts

STO Fibroblasts

Mycoplasma and Pathogen Testing

Karyotype

In Vitro Differentiation of ES Cells

Trophoblast and Extra-Embryonic Endoderm Stem Cells

Epiblast Stem Cells

Progenitor Cells from the Central Nervous System

PROTOCOLS

1 Preparation of Primary Mouse Embryonic Fibroblasts (MEFs)

2 Preparation of Feeder Cell Layers from STO or MEF Cells

3 Passage of ES Cells

4 Cryopreservation of ES Cells

5 Testing Serum Batches

6 Derivation of ES Cell Lines Using Serum-Containing Culture Conditions

7 Derivation of ES Cell Lines Using Small-Molecule Inhibitors of Erk and Gsk3

Signaling (2i)

8 Chromosome Counting

9 Differentiating ES Cells into Embryoid Bodies by Suspension Culture

10 Differentiating ES Cells into Embryoid Bodies by Hanging-Drop Cultures

11 Differentiating ES Cells into Embryoid Bodies in AggreWell Plates

12 Derivation and Culture of TS Cell Lines

13 Derivation and Culture of XEN Cell Lines

14 Derivation and Culture of EpiSC Lines

15 Isolation, Culture, and Differentiation of Progenitor Cells from the <sup>SEP</sup>Central Nervous System

16 Isolation, Propagation, and Differentiation of Radial Glia-Like Neural <sup>SEP</sup>Progenitor Cells in Adherent Cultures

CHAPTER 9

Germline-Competent Stem Cells Derived from Adult Mice

INTRODUCTION

Spermatogonial Stem Cells

Culture of Spermatogonial Stem Cells

Transplantation of Spermatogonial Stem Cells

Induced Pluripotent Stem Cells

Reprogramming Vectors

Testing Pluripotency and Germline Competence of Established iPS Cell Lines

PROTOCOLS

1 Isolation of the Spermatogonial Stem Cell – Containing Fraction from Testes

2 Culture and Expansion of Primary Undifferentiated Spermatogonial Stem Cells

3 Cryopreserving and Thawing Spermatogonial Stem Cells

4 Spermatogonial Stem Cell Transplantation to the Testis

5 Integrating piggyBac Transposon Transgenes into Mouse Fibroblasts by Electroporation

6 Integrating piggyBac Transposon Transgenes into Mouse Fibroblasts <sup>SEP</sup>Using Chemical Methods

7 Reprogramming Mouse Fibroblasts with piggyBac Transposons

CHAPTER 10

Vector Designs for Pluripotent Stem Cell – Based Transgenesis and Genome Alterations

INTRODUCTION

Glossary of Elements

Genomic and Gene Elements

Selectable Markers

Reporters

Site-Specific Recombinases

Inducible Systems

Reporters to Detect Recombinase Action

ES Cell – Mediated Transgenesis

Gene Targeting

Gene and Promoter Trap

Homologous Recombination – Replaceables

Site-Specific Recombination-Mediated Insertions

Induced Site-Specific Chromosomal Aberrations

Isolating ES Cells Homozygous for Specific Mutations

PROTOCOLS

1 In Vitro Screen for Widespread Transgene Expression

2 In Vitro Screen to Identify Silent but Activatable (S/A) Integration Sites<sup>[1][2]</sup> for a Tet-Inducible Transgene

CHAPTER 11

Introduction of Foreign DNA into Embryonic Stem Cells

INTRODUCTION

General Considerations

Culture Conditions

Genotyping Assays

Transfection Methods

Targeting Approaches

Purifying DNA for Introduction into the ES Cell Genome

Electroporating DNA into ES Cells and Selection Methods

Isolating Individual ES Cell Colonies by Picking, Replica-Plating, and Freezing<sup>[1][2]</sup> ES Cell Lines

PROTOCOLS

1 Electroporating DNA into ES Cells

2 Isolating Individual ES Cell Colonies by Picking

3 Passaging and Freezing ES Cells in 96-Well Plates

4 Thawing ES Cells from a 96-Well Plate

5 Rapid Preparation of DNA from Cells in 96-Well Tissue Culture Plates

6 Preparation of DNA from Cells in 24-Well Tissue Culture Plates

7 Genotyping ES Cell Colonies before Picking

CHAPTER 12

Production of Chimeras

INTRODUCTION

General Considerations

Types of Chimeras

Diploid Embryo ↔ Embryo Aggregation Chimeras

ES Cells ↔ Diploid Embryo Aggregation and Injection Chimeras

Diploid ↔ Tetraploid Embryo Aggregation Chimeras

ES Cells ↔ Tetraploid Embryo Aggregation and Injection Chimeras

Preparation of Embryos for Injection or Aggregation

ES Cell Injection Chimeras

The Microinjection Setup

Preparation of the Injection and Holding Pipettes

Transfer of Chimeric Blastocysts

Breeding Chimeric Mice

General Troubleshooting for Chimera Production and Breeding <sup>[1]</sup><sub>SEP</sub> for Germline Transmission

PROTOCOLS

1 Making ES Cell Injection Needles

2 Assembling the Microinjection Setup

3 Preparation of ES Cells for Injection

4 Injecting Blastocysts

5 Injecting Eight-Cell-Stage Embryos

6 Preparation of ES Cells for Aggregation

7 Preparation of the Aggregation Plate

8 Removal of the Zona Pellucida

9 Production of Tetraploid Embryos

10 Assembly of the Aggregates

11 Disaggregating Cleavage-Stage Embryos and the Inner Cell Mass <sup>[1]</sup><sub>SEP</sub> of Blastocysts into Individual Cells

12 Immunosurgery: Isolating the Inner Cell Mass of Blastocysts

CHAPTER 13

Genotyping

INTRODUCTION

Tissue Samples and DNA Preparation for Genotyping or Characterization of Transgenes

Detection and Analysis of Transgene Produced by Pronuclear Injection

Detection and Analysis of ES Cell – Mediated Gene/Genome Alterations

Cloning Transgene/Host DNA Junctions

Identifying Homozygous Transgenic Mice or Embryos

In Situ Hybridization to Interphase Nuclei

Test Breeding

Southern Blot Analysis Using a Flanking Probe

PCR Analysis Using a Flanking Primer

PROTOCOLS

1 Isolation of High-Molecular-Weight DNA from Mouse Tail Tips

2 Isolation of High-Molecular-Weight DNA from Embryonic Tissues, Yolk Sac, Umbilical Cord, and the Like

3 Preparation of Tissue Lysates for PCR Template

- Alternative Protocol: Preparation of Template from Embryonic and Adult Tissue

Samples

- Alternative Protocol: Preparation of Template from Mouse Tail Tissue

4 Polymerase Chain Reaction

5 Preparation of DNA for Southern Blot Analysis or PCR from ES or Other Cultured Cells

CHAPTER 14

Parthenogenesis, Pronuclear Transfer, and Mouse Cloning

INTRODUCTION

Generating Parthenogenotes

Performing Pronuclear Transfer

Cloning Mice

PROTOCOLS

1 Parthenogenetic Activation of Oocytes

2 Pronuclear Transplantation in the Mouse Embryo

3 Cloning Mice

CHAPTER 15

Assisted Reproduction: Ovary Transplantation, In Vitro Fertilization, Artificial Insemination, and Intracytoplasmic Sperm Injection

INTRODUCTION

Approaches to Bypass Mouse Infertility

Female Infertility

Male Infertility

Strategies to Rescue the Germline of Mice

Ovary Transplantation

In Vitro Fertilization

Artificial Insemination

Intracytoplasmic Sperm Injection

PROTOCOLS

1 Ovary Transplantation

2 In Vitro Fertilization

3 Nonsurgical Artificial Insemination

4 Determining the Stage of the Estrous Cycle by Vaginal Smear

5 Surgical Artificial Insemination

6 Intracytoplasmic Sperm Injection

## CHAPTER 16

Cryopreservation, Rederivation, and Transport of Mouse Strains

### INTRODUCTION

Embryo Cryopreservation

Factors to Consider in Embryo Cryopreservation

Equilibrium Methods of Cryopreservation

Nonequilibrium Methods of Cryopreservation

Sperm Cryopreservation

Oocyte and Ovary Cryopreservation

Storage and Records

Rederivation of Mouse Strains

Transport of Mouse Embryos and Germ Plasm

### PROTOCOLS

1 Embryo Cryopreservation by Slow Freezing

2 Embryo Cryopreservation by Rapid Cooling

3 Embryo Cryopreservation by High-Osmolality Vitrification

- Alternative Protocol: High-Osmolality Vitrification of Embryos in Insemination

Straws

4 Sperm Cryopreservation Using Cryoprotectant Containing Monothioglycerol (MTG)

5 Sperm Cryopreservation Using Cryoprotectant Containing L-Glutamine

6 Ovary Cryopreservation

7 Shipment of Live Preimplantation-Stage Embryos

## CHAPTER 17

Techniques for Visualizing Gene Products, Cells, Tissues, and Organ Systems

### INTRODUCTION

Visualizing Gene Products

Isolating Total RNA from Mouse Embryos or Fetal Tissues

General Techniques for Immunohistochemistry and In Situ Hybridization of Mouse Embryo Sections

Immunohistochemistry of Embryo Sections

Immunohistochemistry of Whole-Mount Embryos

Fluorescent Analysis of Whole-Mount Embryos and Fetal Organs

In Situ Hybridization of Embryo and Tissue Sections with RNA Probes

In Situ Hybridization of Whole-Mount Embryos with RNA Probes

Staining for  $\beta$ -Galactosidase Activity

Staining for Alkaline Phosphatase Activity

Visualizing Cells

Visualizing Fluorescent Proteins

Visualizing Tissues and Organ Systems

Visualizing the Mouse Skeleton Using Histochemical Stains

Visualizing the Fetal Vasculature by India Ink Injection

Visualizing the Fetal Great Blood Vessels by Plastic Casting

PROTOCOLS

1 Isolating Total RNA from Mouse Embryos or Fetal Tissues

2 Preparing Tissue Fixation Solutions

- Alternative Protocol: Bouin's Fixative

3 Handling Blastocysts for Fixation

4 Embedding Samples in Wax

- Additional Protocol: Embedding Small Embryos

5 Preparing Glass Slides and Coverslips for In Situ Hybridization

6 Cutting Wax Sections Using a Microtome

- Alternative Protocol: Transferring Sections onto Water Droplets

7 Cutting Thick Sections Using a Vibratome

- Alternative Protocol: Modifications for Live Specimens

8 Dewaxing and Rehydrating Sections before In Situ Hybridization or Staining

9 Immunohistochemistry of Embryo Sections

10 Immunohistochemistry of Whole-Mount Embryos

11 DAPI Staining of Whole-Mount Embryos or Fetal Organs

12 Immunofluorescent Staining of Whole-Mount Embryos

13 Mounting Embryos for Microscopic Observation and Imaging

14 In Situ Hybridization of Embryo and Tissue Sections with <sup>32</sup>P-Radiolabeled RNA Probes

- Additional Protocol: Autoradiography

15 In Situ Hybridization of Whole-Mount Embryos with Nonradiolabeled <sup>32</sup>P-RNA Probes

16 Imaging Embryos after Whole-Mount In Situ Hybridization

17 Sectioning Embryos after Whole-Mount In Situ Hybridization

- Alternative Protocol: Wax Sections

18 Staining Whole Embryos and Sections for  $\beta$ -Galactosidase (LacZ) Activity

- Alternative Protocol: Staining Frozen Sections

- 19 Staining for Alkaline Phosphatase Activity
- 20 Visualization of Fluorescent Protein Expression in Whole-Mount<sup>[11]</sup> Postimplantation-Stage Embryos
- 21 Observation of Fluorescent Proteins in Living Cells
- 22 Intracellular Observation of Fluorescent Proteins in Fixed Cells
- 23 Fixation and Paraffin Embedding for GFP Visualization
- 24 Alcian Blue Staining of the Fetal Cartilaginous Skeleton
- 25 Alcian Blue/Alizarin Red Staining of Cartilage and Bone
- 26 Alizarin Red Staining of Postnatal Bone
- 27 Visualizing the Fetal Vasculature by India Ink Injection
- 28 Visualizing the Fetal Great Blood Vessels by Plastic Casting

## CHAPTER 18

### Setting Up a Micromanipulation Laboratory

#### INTRODUCTION

The Micromanipulation Laboratory and Its Environment

General Considerations

Inbred, Outbred, Hybrid, and Genetically Modified Mice

General Equipment

Refrigerators and Freezers

Incubators

Laminar Flow Hoods and Biological Safety Cabinets

Microscopes

Stereomicroscopes

Inverted Microscopes

Temperature Controllers for Heating and Cooling Microscope Stages

Vibration-Free Tables

Micromanipulation

Micromanipulators

Microinjection Systems

Piezo Impact and Laser Systems

Production of Microtools from Glass Capillaries

Pullers

Microforges, Bevelers, and Grinders

Electrofusion

Surgical Instruments

Cryopreservation

## APPENDIX 1

Buffers and Solutions

Acidic Tyrode's Solution for Removing Zonae Pellucidae from <sup>[SEP]</sup>Preimplantation Embryos

Alkaline Phosphatase Buffers (NTMT)

Alkaline Phosphatase Staining Solution

Chicago Sky Blue 6B, Also Called Pontamine Sky Blue

Hyaluronidase

Mannitol (0.3 M)

Methylene Blue Solution

Pancreatin/Trypsin Solution for Separating Germ and Tissue Layers

PBSMT for Immunohistochemistry of Whole-Mount Embryos

PBT

Phenol:Chloroform Solution for Isolating Total RNA from Mouse Embryos or <sup>[SEP]</sup>Fetal Tissues

Phosphate-Buffered Saline (PBS)

Pronase Solution

Saline/EDTA Buffer plus Glucose for Isolation of Germ Cells and Tissue Culture

SSC (20x)

SSPE (20x)

TAE (Tris-Acetate/EDTA) Buffer (1x Solution)

TE (Tris – EDTA) Buffer

Trypsin (0.25%) in Tris-Saline for Tissue Culture

Trypsin – EDTA Solution

Tyrode Ringer's Saline (pH 7.6–7.7), Ca<sup>2+</sup>/Mg<sup>2+</sup>-Free

APPENDIX 2

WWW Resources

APPENDIX 3

General Safety and Hazardous Material Information

Index
