

Contents

Preface

The Evolutionary Origins of Programmed Cell Death Signaling

Kay Hofmann

BAX, BAK, and BOK: A Coming of Age for the BCL-2 Family Effector Proteins

Tudor Moldoveanu and Peter E. Czabotar

Cracking the Cell Death Code

Carla V. Rothlin and Sourav Ghosh

Phagocyte Responses to Cell Death in Flies

Andrew J. Davidson and Will Wood

Multitasking Kinase RIPK1 Regulates Cell Death and Inflammation

Kim Newton

The Killer Pseudokinase Mixed Lineage Kinase Domain-Like Protein (MLKL)

James M. Murphy

Death Receptors and Their Ligands in Inflammatory Disease and Cancer

Alessandro Annibaldi and Henning Walczak

Recent Insights on Inflammasomes, Gasdermin Pores, and Pyroptosis

Nathalia M. de Vasconcelos and Mohamed Lamkanfi

Mechanism and Regulation of Gasdermin-Mediated Cell Death

Shiyu Xia, Louis Robert Hollingsworth IV, and Hao Wu

A20 at the Crossroads of Cell Death, Inflammation, and Autoimmunity

Arne Martens and Geert van Loo

Regulation of Cell Death and Immunity by XIAP

Philipp J. Jost and Domagoj Vucic

Cell Death and Neurodegeneration

Benjamin J. Andreone, Martin Larhammar, and Joseph W. Lewcock

Programmed Cell Death in the Evolutionary Race against Bacterial Virulence Factors

Carolyn A. Lacey and Edward A. Miao

Cell-Cycle Cross Talk with Caspases and Their Substrates

Patrick Connolly, Irmina Garcia-Carpio, and Andreas Villunger

Cell Death in Plant Immunity

Eugenia Pitsili, Ujjal J. Phukan, and Nuria S. Coll

Dysregulation of Cell Death in Human Chronic Inflammation

Yue Li, Christoph Klein, and Daniel Kotlarz

Neutrophil Extracellular Traps in Host Defense
Sabrina Sofia Burgener and Kate Schroder
Index
