

# Brief Contents

## PART 1 Principles of Biochemistry

- 1 Principles of Biochemistry 2
- 2 Physical Biochemistry: Energy Conversion, Water, and Membranes 38
- 3 Nucleic Acid Structure and Function 92

## PART 2 Protein Biochemistry

- 4 Protein Structure 156
- 5 Methods in Protein Biochemistry 222
- 6 Protein Function 264
- 7 Enzyme Mechanisms 322
- 8 Cell Signaling Systems 388

## PART 3 Energy Conversion Pathways

- 9 Glycolysis: A Paradigm of Metabolic Regulation 448
- 10 The Citrate Cycle 502
- 11 Oxidative Phosphorylation 552
- 12 Photosynthesis 608

## PART 4 Metabolic Regulation

- 13 Carbohydrate Structure and Function 664
- 14 Carbohydrate Metabolism 710
- 15 Lipid Structure and Function 762
- 16 Lipid Metabolism 810
- 17 Amino Acid Metabolism 870
- 18 Nucleotide Metabolism 936
- 19 Metabolic Integration 984

## PART 5 Genomic Regulation

- 20 DNA Replication, Repair, and Recombination 1032
- 21 RNA Synthesis, Processing, and Gene Silencing 1088
- 22 Protein Synthesis, Posttranslational Modification, and Transport 1134
- 23 Gene Regulation 1174
