

Contents

Chapter 0. Introduction

Part I: Basic Concepts and Methods

Chapter 1. Statistical Description

Chapter 2. Probability Distribution

Chapter 3. Parameter Estimation

Chapter 4. Hypothesis Testing

Chapter 5. Comparison of Means between Two Groups

Chapter 6. Comparison of Means among Multiple Groups

Chapter 7. Comparison of Distributions of Categorical Variables

Chapter 8. Analysis of Association

Chapter 9. Simple Linear Regression

Part II: Design and Implementation of Bio-medical Research

Chapter 10. Sampling Survey

Chapter 11. Interventional Study

Chapter 12. Clinical Trial

Chapter 13. Observational Comparative Effectiveness Research

Chapter 14. Diagnostic Test

Chapter 15. Sample Size Estimation

Chapter 16. Missing Data

Chapter 17. Statistical Reporting Guidelines for Medical Papers

Part III: Frequently Used Powerful Statistical Methods

Chapter 18. Analysis of Variance for Complicated Designs

Chapter 19. Multiple Linear Regression

Chapter 20. Logistic Regression

Chapter 21. Survival Analysis

Chapter 22. Discriminant Analysis and Classification Tree

Chapter 23. Cluster Analysis

Chapter 24. Principal Component Analysis and Factor Analysis

Part IV: Selected Topics of Advanced Statistics

Chapter 25. Meta Analysis

Chapter 26. Time Series

Chapter 27. Structural Equation Model

Chapter 28. Multi-Level Model

Chapter 29. Item Response Theory

Chapter 30. Statistics for Genetics

Chapter 31. Statistics for Bioinformatics

Chapter 32. Data Mining

Appendix A: Introduction for Statistical Software

A1 Introduction to SPSS

A2 Introduction to Excel for Statistics

A3 Introduction to R Language

Appendix B: Supplement for the Text (Available Online)

B1 Program, Data and Output for Computer Experiments

B2 Referenced Answer for Case Discrimination

B3 Referenced Answer for Think and Practice

Appendix C: Statistical Tables

C1 Frequently Used Tables

C2 Others (Available Online)
