

Table of contents

- 1: How to Use this Book
- 2: Installing and Running R
- 3: Very Basic R Syntax
- 4: First Simple Programs and Graphics
- 5: The Dataframe Concept
- 6: Plotting Biological Data in Various Ways
- 7: The Grammar of Graphics Family of Packages
- 8: Sets and Venn diagrams
- 9: Statistics: Choosing the Right Test
- 10: Commonly Used Measures and Statistical Tests
- 11: Regression and Correlation Analyses
- 12: Count Data as Response Variable
- 13: Analysis of Variance (ANOVA)
- 14: Analysis of Covariance (ANCOVA)
- 15: More Generalised Linear Modelling
- 16: Monte Carlo Tests and Randomisation
- 17: Principal Components Analysis
- 18: Species Abundance, Accumulation and Diversity Data
- 19: Survivorship
- 20: Dates and Julian Dates
- 21: Mapping and Parsing Text Input for Data
- 22: More on Manipulating Text
- 23: Phylogenies and Trees
- 24: Working with DNA Sequences and other character data
- 25: Spacing in Two Dimensions
- 26: Population Modelling Including Spatially Explicit Models
- 27: More on “apply” Family of Functions – Avoid Loops to get More Speed
- 28: Food webs and simple graphics
- 29: Adding Photographs
- 30: Standard Distributions in R
- 31: Reading and Writing Data to and from Files
