Introduction: Nature's gift to neuroscience

Joy Alcedo, Yishi Jin, Douglas S. Portman, Veena Prahlad, David Raizen, Georgia Rapti, X.Z. Shawn Xu, Yun Zhang, and Chun-Fang Wu

Part 1: The early years of *C. elegans* neurogenetics

1. My life with Sydney, 1961–1971

Antony O. W. Stretton

2. John Sulston (1942–2018): a personal perspective

Robert H. Waterston and Donald G. Moerman

3. A touching story

Martin Chalfie

4. But can they learn? My accidental discovery of learning and memory in *C. elegans*

Catharine H. Rankin

5. Of worms and men

John White

Part 2: Nervous system development

6. A perspective on *C. elegans* neurodevelopment: from early visionaries to a booming neuroscience research

Georgia Rapti

7. Neuronal specification in *C. elegans*: combining lineage inheritance with intercellular signaling

Antoine Barrière and Vincent Bertrand

8. Molecular mechanisms governing axonal transport: a *C. elegans* perspective

Amruta Vasudevan and Sandhya P. Koushika

9. *C. elegans* MAGU-2/Mpp5 homolog regulates epidermal phagocytosis and synapse density

Salvatore J. Cherra III, Alexandr Goncharov, Daniela Boassa, Mark Ellisman, and Yishi Jin

10. Synaptic remodeling, lessons from *C. elegans*

Andrea Cuentas-Condori and David M. Miller, 3rd

11. What about the males? the *C. elegans* sexually dimorphic nervous system and a CRISPR-based tool to study males in a hermaphroditic species

Jonathon D. Walsh, Olivier Boivin, and Maureen M. Barr

12. Cell-type-specific promoters for *C. elegans* glia

Wendy Fung, Leigh Wexler, and Maxwell G. Heiman

Part 3: From inputs to outputs

13. *C. elegans*: a sensible model for sensory biology

Adam J. Iliff and X.Z. Shawn Xu

14. Temperature signaling underlying thermotaxis and cold tolerance in *Caenorhabditis elegans*
Asuka Takeishi, Natsune Takagaki, and Atsushi Kuhara
 15. Mechano-gated channels in *C. elegans*
Umar Al-Sheikh and Lijun Kang
 16. What can a worm learn in a bacteria-rich habitat?
He Liu and Yun Zhang
 17. *C. elegans* aversive olfactory learning generates diverse intergenerational effects
Ana Goncalves Pereira, Xicotencatl Gracida, Konstantinos Kagias and Yun Zhang
- Part 4: Social and sexual behaviors
18. Social and sexual behaviors in *C. elegans*: the first fifty years
Douglas S. Portman
 19. Small molecule signals mediate social behaviors in *C. elegans*
Caroline S. Muirhead and Jagan Srinivasan
 20. Intraguild predation between *Pristionchus pacificus* and *Caenorhabditis elegans*: a complex interaction with the potential for aggressive behaviour
Kathleen T. Quach and Sreekanth H. Chalasani
 21. Plasticity of pheromone-mediated avoidance behavior in *C. elegans*
YongJin Cheon, Hyeonjeong Hwang, and Kyuhyung Kim
- Part 5: Quiescence and sleep
22. Worms sleep: a perspective
David Raizen
 23. Cellular damage, including wounding, drives *C. elegans* stress-induced sleep
Desiree L. Goetting, Richard Mansfield, Rony Soto, and Cheryl Van Buskirk
 24. Orcokinin neuropeptides regulate sleep in *Caenorhabditis elegans*
Madison Honer, Kristen Buscemi, Natalie Barrett, Niknaz Riazati, Gerald Orlando, and Matthew D. Nelson
 25. Discriminating between sleep and exercise-induced fatigue using computer vision and behavioral genetics
Kelsey N. Schuch, Lakshmi Narasimhan Govindarajan, Yuliang Guo, Saba N. Baskoylu, Sarah Kim, Benjamin Kimia, Thomas Serre, and Anne C. Hart
 26. The OptoGenBox – a device for long-term optogenetics in *C. elegans*
Inka Busack, Florian Jordan, Peleg Sapir, and Henrik Bringmann
- Part 6: Survival, aging and disease
27. Neuromodulators: an essential part of survival
Joy Alcedo and Veena Prahlad
 28. Neuroendocrine control of lipid metabolism: lessons from *C. elegans*
Supriya Srinivasan

29. The discovery and consequences of the central role of the nervous system in the control of protein homeostasis

Veena Prahlad

30. Host-microbe interactions and the behavior of *Caenorhabditis elegans*

Dennis H. Kim and Steven W. Flavell

31. Neurogenetics of nictation, a dispersal strategy in nematodes

Heeseung Yang, Bo Yun Lee, Hyunsoo Yim, and Junho Lee

32. Regulatory systems that mediate the effects of temperature on the lifespan of *Caenorhabditis elegans*

Byoungun Kim, Jongsun Lee, Younghun Kim, and Seung-Jae V. Lee

33. The contribution of *C. elegans* neurogenetics to understanding neurodegenerative diseases

Joseph J. H. Liang, Issa A. McKinnon, and Catharine H. Rankin

Part 7: Worm photo and art gallery

34. A journey to 'tame a small metazoan organism', seen through the artistic eyes of *C. elegans* researchers

Eleni Gourgou, Alexandra R. Willis, Sebastian Giunti, Maria J. De Rosa, Amanda G. Charlesworth, Mirella Hernandez Lima, Elizabeth Glater, Sonja Soo, Bianca Pereira, Kübra Akbas, Anushka Deb, Madhushree Kamak, Mark W. Moyle, Annika Traa, Aakanksha Singhvi, Surojit Sural, and Eugene Jennifer Jin
