| \mathbf{P} | Preface | | |
|--------------|---------------------------|--|------------|
| P | art I: | Fundamentals of Bayesian Inference | 1 |
| 1 | Pro | bability and inference | 3 |
| | 1.1 | The three steps of Bayesian data analysis | 3 |
| | 1.2 | General notation for statistical inference | 4 |
| | 1.3 | Bayesian inference | ϵ |
| | 1.4 | Discrete examples: genetics and spell checking | 8 |
| | 1.5 | Probability as a measure of uncertainty | 11 |
| | 1.6 | Example: probabilities from football point spreads | 13 |
| | 1.7 | Example: calibration for record linkage | 16 |
| | 1.8 | Some useful results from probability theory | 19 |
| | 1.9 | Computation and software | 22 |
| | 1.10 | Bayesian inference in applied statistics | 24 |
| | 1.11 | Bibliographic note | 25 |
| | 1.12 | Exercises | 27 |
| 2 | 2 Single-parameter models | | 29 |
| | 2.1 | Estimating a probability from binomial data | 29 |
| | 2.2 | Posterior as compromise between data and prior information | 32 |
| | 2.3 | Summarizing posterior inference | 32 |
| | 2.4 | Informative prior distributions | 34 |
| | 2.5 | Normal distribution with known variance | 39 |
| | 2.6 | Other standard single-parameter models | 42 |
| | 2.7 | Example: informative prior distribution for cancer rates | 46 |
| | 2.8 | Noninformative prior distributions | 51 |
| | 2.9 | Weakly informative prior distributions | 55 |
| | 2.10 | Bibliographic note | 56 |
| | 2.11 | Exercises | 57 |
| 3 | Intr | oduction to multiparameter models | 63 |
| | 3.1 | Averaging over 'nuisance parameters' | 63 |
| | 3.2 | Normal data with a noninformative prior distribution | 64 |
| | 3.3 | Normal data with a conjugate prior distribution | 67 |
| | 3.4 | Multinomial model for categorical data | 69 |
| | 3.5 | Multivariate normal model with known variance | 70 |
| | 3.6 | Multivariate normal with unknown mean and variance | 72 |
| | 3.7 | Example: analysis of a bioassay experiment | 74 |
| | 3.8 | Summary of elementary modeling and computation | 78 |
| | 3.9 | Bibliographic note | 78 |
| | | Expansions | 70 |

| viii | CONTENTS |
|------|----------|
| | |

| 4 | Asymptotics and connections to non-Bayesian approaches 4.1 Normal approximations to the posterior distribution 4.2 Large-sample theory 4.3 Counterexamples to the theorems 4.4 Frequency evaluations of Bayesian inferences 4.5 Bayesian interpretations of other statistical methods 4.6 Bibliographic note 4.7 Exercises | 83 83 87 89 91 92 97 |
|----|---|---|
| 5 | Hierarchical models 5.1 Constructing a parameterized prior distribution 5.2 Exchangeability and hierarchical models 5.3 Bayesian analysis of conjugate hierarchical models 5.4 Normal model with exchangeable parameters 5.5 Example: parallel experiments in eight schools 5.6 Hierarchical modeling applied to a meta-analysis 5.7 Weakly informative priors for variance parameters 5.8 Bibliographic note 5.9 Exercises | 101 102 104 108 113 119 124 128 132 |
| Pa | art II: Fundamentals of Bayesian Data Analysis | 139 |
| 6 | Model checking 6.1 The place of model checking in applied Bayesian statistics 6.2 Do the inferences from the model make sense? 6.3 Posterior predictive checking 6.4 Graphical posterior predictive checks 6.5 Model checking for the educational testing example 6.6 Bibliographic note 6.7 Exercises | 141 141 142 143 153 159 161 163 |
| 7 | Evaluating, comparing, and expanding models 7.1 Measures of predictive accuracy 7.2 Information criteria and cross-validation 7.3 Model comparison based on predictive performance 7.4 Model comparison using Bayes factors 7.5 Continuous model expansion 7.6 Implicit assumptions and model expansion: an example 7.7 Bibliographic note 7.8 Exercises | 165 166 169 178 182 184 187 192 |
| 8 | Modeling accounting for data collection 8.1 Bayesian inference requires a model for data collection 8.2 Data-collection models and ignorability 8.3 Sample surveys 8.4 Designed experiments 8.5 Sensitivity and the role of randomization 8.6 Observational studies 8.7 Censoring and truncation 8.8 Discussion 8.9 Bibliographic note 8.10 Exercises | 197 197 199 205 214 218 220 224 229 229 |

| CONTENTS | | |
|----------|---|-----|
| 9 I | Decision analysis | 237 |
| 9 | .1 Bayesian decision theory in different contexts | 237 |
| 9 | .2 Using regression predictions: survey incentives | 239 |
| 9 | .3 Multistage decision making: medical screening | 245 |
| 9 | .4 Hierarchical decision analysis for home radon | 246 |
| 9 | .5 Personal vs. institutional decision analysis | 256 |
| 9 | .6 Bibliographic note | 257 |
| 9 | .7 Exercises | 257 |
| Part | t III: Advanced Computation | 259 |
| 10 I | ntroduction to Bayesian computation | 261 |
| 1 | 0.1 Numerical integration | 261 |
| 1 | 0.2 Distributional approximations | 262 |
| 1 | 0.3 Direct simulation and rejection sampling | 263 |
| 1 | 0.4 Importance sampling | 265 |
| 1 | 0.5 How many simulation draws are needed? | 267 |
| 1 | 0.6 Computing environments | 268 |
| 1 | 0.7 Debugging Bayesian computing | 270 |
| 1 | 0.8 Bibliographic note | 271 |
| 1 | 0.9 Exercises | 272 |
| 11 E | Basics of Markov chain simulation | 275 |
| 1 | 1.1 Gibbs sampler | 276 |
| 1 | 1.2 Metropolis and Metropolis-Hastings algorithms | 278 |
| 1 | 1.3 Using Gibbs and Metropolis as building blocks | 280 |
| 1 | 1.4 Inference and assessing convergence | 281 |
| 1 | 1.5 Effective number of simulation draws | 286 |
| 1 | 1.6 Example: hierarchical normal model | 288 |
| 1 | 1.7 Bibliographic note | 291 |
| 1 | 1.8 Exercises | 291 |
| 12 (| Computationally efficient Markov chain simulation | 293 |
| 1 | 2.1 Efficient Gibbs samplers | 293 |
| 1 | 2.2 Efficient Metropolis jumping rules | 295 |
| 1 | 2.3 Further extensions to Gibbs and Metropolis | 297 |
| 1 | 2.4 Hamiltonian Monte Carlo | 300 |
| 1 | 2.5 Hamiltonian Monte Carlo for a hierarchical model | 305 |
| 1 | 2.6 Stan: developing a computing environment | 307 |
| 1 | 2.7 Bibliographic note | 308 |
| 1 | 2.8 Exercises | 309 |
| | Modal and distributional approximations | 311 |
| 1 | 3.1 Finding posterior modes | 311 |
| 1 | 3.2 Boundary-avoiding priors for modal summaries | 313 |
| | 3.3 Normal and related mixture approximations | 318 |
| 1 | 3.4 Finding marginal posterior modes using EM | 320 |
| 1 | 3.5 Conditional and marginal posterior approximations | 325 |
| 1 | 3.6 Example: hierarchical normal model (continued) | 326 |
| 1 | 3.7 Variational inference | 331 |
| 1 | 3.8 Expectation propagation | 338 |

343

13.9 Other approximations

| x | | CONTENTS |
|---------|--|----------|
| 13.10 | Unknown normalizing factors | 345 |
| | 1 Bibliographic note | 348 |
| | 2 Exercises | 349 |
| Part IV | 7: Regression Models | 351 |
| 14 Intr | oduction to regression models | 353 |
| 14.1 | Conditional modeling | 353 |
| 14.2 | Bayesian analysis of classical regression | 354 |
| 14.3 | Regression for causal inference: incumbency and voting | 358 |
| 14.4 | Goals of regression analysis | 364 |
| 14.5 | Assembling the matrix of explanatory variables | 365 |
| 14.6 | Regularization and dimension reduction | 367 |
| 14.7 | Unequal variances and correlations | 369 |
| 14.8 | Including numerical prior information | 376 |
| 14.9 | Bibliographic note | 378 |
| 14.10 |) Exercises | 378 |
| 15 Hier | rarchical linear models | 381 |
| 15.1 | Regression coefficients exchangeable in batches | 382 |
| 15.2 | Example: forecasting U.S. presidential elections | 383 |
| 15.3 | Interpreting a normal prior distribution as extra data | 388 |
| 15.4 | Varying intercepts and slopes | 390 |
| 15.5 | Computation: batching and transformation | 392 |
| 15.6 | Analysis of variance and the batching of coefficients | 395 |
| 15.7 | Hierarchical models for batches of variance components | 398 |
| 15.8 | Bibliographic note | 400 |
| 15.9 | Exercises | 402 |
| 16 Gen | eralized linear models | 405 |
| | Standard generalized linear model likelihoods | 406 |
| | Working with generalized linear models | 407 |
| | Weakly informative priors for logistic regression | 412 |
| | Overdispersed Poisson regression for police stops | 420 |
| 16.5 | | 422 |
| 16.6 | Models for multivariate and multinomial responses | 423 |
| | Loglinear models for multivariate discrete data | 428 |
| | Bibliographic note | 431 |
| | Exercises | 432 |
| 17 Mod | dels for robust inference | 435 |
| | Aspects of robustness | 435 |
| | Overdispersed versions of standard models | 437 |
| | Posterior inference and computation | 439 |
| | Robust inference for the eight schools | 441 |
| | Robust regression using t -distributed errors | 444 |
| | Bibliographic note | 445 |
| | Exercises | 446 |

| 18 Models for missing data 449 18.1 Notation 449 18.2 Multiple imputation 451 18.3 Missing data in the multivariate normal and t models 454 18.4 Example: multiple imputation for a series of polls 456 18.5 Missing values with counted data 462 18.6 Example: an opinion poll in Slovenia 463 18.7 Bibliographic note 466 18.8 Exercises 467 Part V: Nonlinear and Nonparametric Models 469 19 Parametric nonlinear models 471 19.1 Example: serial dilution assay 471 19.2 Example: population toxicokinetics 477 19.3 Bibliographic note 485 19.4 Exercises 486 20 Basis function models 487 20.1 Splines and weighted sums of basis functions 487 20.2 Basis selection and shrinkage of coefficients 490 20.3 Non-normal models and regression surfaces 494 20.4 Bibliographic note 498 20.5 Exercises 501 21 Gaussian process models 501 21.2 Example: birthdays and birthdates 505 21.3 Latent Gaussian process m | CONTI | ENTS | xi |
|--|---------|--|-----|
| 18.2 Multiple imputation 451 18.3 Missing data in the multivariate normal and t models 454 18.4 Example: multiple imputation for a series of polls 456 18.5 Missing values with counted data 462 18.6 Example: an opinion poll in Slovenia 463 18.7 Bibliographic note 466 18.8 Exercises 467 Part V: Nonlinear and Nonparametric Models 469 19 Parametric nonlinear models 471 19.1 Example: serial dilution assay 471 19.2 Example: population toxicokinetics 477 19.3 Bibliographic note 485 19.4 Exercises 486 20 Basis function models 487 20.1 Splines and weighted sums of basis functions 487 20.2 Basis selection and shrinkage of coefficients 490 20.3 Non-normal models and regression surfaces 494 20.4 Bibliographic note 498 21.1 Gaussian process models 501 21.2 Example: restrictages and birthdates 505 21.3 Latent Gaussian process models 510 21.4 Functional data analysis 512 21.5 Density estimation and regression 513 < | 18 Mo | dels for missing data | 449 |
| 18.3 Missing data in the multivariate normal and t models 454 18.4 Example: multiple imputation for a series of polls 456 18.5 Missing values with counted data 462 18.6 Example: an opinion poll in Slovenia 463 18.7 Bibliographic note 466 18.8 Exercises 467 Part V: Nonlinear models 471 19.1 Example: serial dilution assay 471 19.2 Example: serial dilution assay 471 19.3 Bibliographic note 485 19.4 Exercises 486 20 Basis function models 487 20.1 Splines and weighted sums of basis functions 487 20.2 Basis selection and shrinkage of coefficients 490 20.3 Non-normal models and regression surfaces 494 20.4 Bibliographic note 498 20.5 Exercises 498 21 Gaussian process models 501 21.1 Gaussian process models 501 21.2 Example: birthdays and birthdates 505 21.3 | 18.1 | Notation | 449 |
| 18.4 Example: multiple imputation for a series of polls 456 18.5 Missing values with counted data 462 18.6 Example: an opinion poll in Slovenia 463 18.7 Bibliographic note 466 18.8 Exercises 467 Part V: Nonlinear and Nonparametric Models 19 Parametric nonlinear models 471 19.1 Example: serial dilution assay 471 19.2 Example: population toxicokinetics 477 19.3 Bibliographic note 485 19.4 Exercises 486 20 Basis function models 487 20.1 Splines and weighted sums of basis functions 487 20.2 Basis selection and shrinkage of coefficients 490 20.3 Non-normal models and regression surfaces 494 20.4 Bibliographic note 498 20.5 Exercises 498 21 Gaussian process models 501 21.1 Gaussian process models 501 21.2 Example: birthdays and birthdates 505 21.3 Latent Gaussian process models 510 21.4 Functional data analysis 512 21.5 Density estimation and regression <td>18.2</td> <td>Multiple imputation</td> <td>451</td> | 18.2 | Multiple imputation | 451 |
| 18.5 Missing values with counted data 462 18.6 Example: an opinion poll in Slovenia 463 18.7 Bibliographic note 466 18.8 Exercises 467 Part V: Nonlinear and Nonparametric Models 469 19 Parametric nonlinear models 471 19.1 Example: serial dilution assay 471 19.2 Example: population toxicokinetics 477 19.3 Bibliographic note 485 19.4 Exercises 486 20 Basis function models 487 20.1 Splines and weighted sums of basis functions 487 20.2 Basis selection and shrinkage of coefficients 490 20.3 Non-normal models and regression surfaces 494 20.4 Bibliographic note 498 20.5 Exercises 498 21 Gaussian process models 501 21.1 Gaussian process models 501 21.2 Example: birthdays and birthdates 505 21.3 Latent Gaussian process models 510 21.4 Functional data a | 18.3 | Missing data in the multivariate normal and t models | 454 |
