

MR WATT'S PATENT ROTATIVE STEAM ENGINE
as constructed by Messrs Boulton & Watt, Soho, from 1787 to 1800
of Liverpool

Physical Models of Living Systems

Probability, Simulation, Dynamics

Second edition

Philip Nelson

University of Pennsylvania
with the assistance of Sarina Bromberg,
Ann Hermundstad, Keith Kroma-Wiley,
and Jason Prentice

Scale of Feet for 10 horse power

Brief contents

PART I First Steps

Chapter 1 | Virus Dynamics 6

Chapter 2 | Physics and Biology 25

PART II Randomness in Biology

Chapter 3 | Discrete Randomness 33

Chapter 4 | Some Useful Discrete Distributions 72

Chapter 5 | Continuous Distributions 105

Chapter 6 | Random Walks on an Energy Landscape 138

Chapter 7 | Model Selection and Parameter Estimation 166

Chapter 8 | *Excursion*: Single Particle Reconstruction in Cryo-electron Microscopy 202

Chapter 9 | Poisson Processes and Their Simulation 232

Chapter 10 | Randomness in Cellular Processes 261

PART III Feedback Control

Chapter 11 | Negative Feedback Control 296

Chapter 12 | Positive Feedback, Epidemics, and Genetic Switches 331

Chapter 13 | Cellular Oscillators 379

PART IV | Nonlinear, Stochastic Dynamical Systems

Chapter 14 | Demographic Variation in Epidemic Spread 403

Chapter 15 | Bet-Hedging Via Stochastic, Excitable Dynamics 412

Epilogue 427

Appendix A | Global List of Symbols 430

Appendix B | Units and Dimensional Analysis 436

Appendix C | Numerical Values 442

Acknowledgments 443

Credits 446

Bibliography 448
