Preface to the third edition	xiii
Preface to the second edition	xv
Preface to the first edition	xvii
I Modelling and networks	1
1 Introduction to biological modelling	3
1.1 What is modelling?	3
1.2 Aims of modelling	4
1.3 Why is stochastic modelling necessary?	4
1.4 Chemical reactions	8
1.5 Modelling genetic and biochemical networks	10
1.6 Modelling higher-level systems	18
1.7 Exercises	20
1.8 Further reading	20
2 Representation of biochemical networks	23
2.1 Coupled chemical reactions	23
2.2 Graphical representations	24
2.3 Petri nets	26
2.4 Stochastic process algebras	36
2.5 Systems Biology Markup Language (SBML)	38
2.6 SBML-shorthand	43
2.7 Exercises	49
2.8 Further reading	50

II	Stochastic processes and simulation	51
3	Probability models	53
3.1	Probability	53
3.2	Discrete probability models	64
3.3	The discrete uniform distribution	72
3.4	The binomial distribution	73
3.5	The geometric distribution	73
3.6	The Poisson distribution	76
3.7	Continuous probability models	79
3.8	The uniform distribution	84
3.9	The exponential distribution	87
3.10	The normal/Gaussian distribution	91
3.11	The gamma distribution	95
3.12	Quantifying ‘noise’	98
3.13	Exercises	99
3.14	Further reading	100
4	Stochastic simulation	101
4.1	Introduction	101
4.2	Monte Carlo integration	101
4.3	Uniform random number generation	102
4.4	Transformation methods	103
4.5	Lookup methods	108
4.6	Rejection samplers	109
4.7	Importance resampling	112
4.8	The Poisson process	113
4.9	Using the statistical programming language R	114
4.10	Analysis of simulation output	120
4.11	Exercises	122
4.12	Further reading	124
5	Markov processes	125
5.1	Introduction	125
5.2	Finite discrete time Markov chains	125
5.3	Markov chains with continuous state-space	132
5.4	Markov chains in continuous time	139
5.5	Diffusion processes	154
5.6	Exercises	168
5.7	Further reading	170
III	Stochastic chemical kinetics	171
6	Chemical and biochemical kinetics	173
6.1	Classical continuous deterministic chemical kinetics	173

6.2	Molecular approach to kinetics	180
6.3	Mass-action stochastic kinetics	182
6.4	The Gillespie algorithm	184
6.5	Stochastic Petri nets (SPNs)	185
6.6	Structuring stochastic simulation codes	188
6.7	Rate constant conversion	191
6.8	Kolmogorov's equations and other analytic representations	196
6.9	Software for simulating stochastic kinetic networks	201
6.10	Exercises	202
6.11	Further reading	203
7	Case studies	205
7.1	Introduction	205
7.2	Dimerisation kinetics	205
7.3	Michaelis–Menten enzyme kinetics	210
7.4	An auto-regulatory genetic network	214
7.5	The <i>lac</i> operon	219
7.6	Exercises	221
7.7	Further reading	222
8	Beyond the Gillespie algorithm	223
8.1	Introduction	223
8.2	Exact simulation methods	223
8.3	Approximate simulation strategies	228
8.4	Hybrid simulation strategies	241
8.5	Exercises	247
8.6	Further reading	247
9	Spatially extended systems	249
9.1	Introduction	249
9.2	One-dimensional reaction–diffusion systems	250
9.3	Two-dimensional reaction–diffusion systems	258
9.4	Exercises	259
9.5	Further reading	260
IV	Bayesian inference	271
10	Bayesian inference and MCMC	273
10.1	Likelihood and Bayesian inference	273
10.2	The Gibbs sampler	278
10.3	The Metropolis–Hastings algorithm	288
10.4	Hybrid MCMC schemes	292
10.5	Metropolis–Hastings algorithms for Bayesian inference	293
10.6	Bayesian inference for latent variable models	294
10.7	Alternatives to MCMC	299

10.8 Exercises	301
10.9 Further reading	302
11 Inference for stochastic kinetic models	303
11.1 Introduction	303
11.2 Inference given complete data	304
11.3 Discrete-time observations of the system state	307
11.4 Diffusion approximations for inference	314
11.5 Likelihood-free methods	318
11.6 Approximate Bayesian computation (ABC) for parameter inference	335
11.7 Network inference and model comparison	344
11.8 Exercises	347
11.9 Further reading	349
12 Conclusions	351
Appendix A SBML Models	355
A.1 Auto-regulatory network	355
A.2 Lotka–Volterra reaction system	358
A.3 Dimerisation-kinetics model	359
Appendix B Software associated with this book	363
B.1 smfsb R package	363
B.2 SBML-shorthand	364
B.3 smfsbSBML R package	364
B.4 scala-smfsb library	365
Bibliography	367
Index	379
