List of figures

What is statistical mechanics?

1.1:Quantum dice and coins

1.2:Probability distributions

1.3:Waiting time paradox

1.4:Stirling's formula

1.5:Stirling and asymptotic series

1.6:Random matrix theory

1.7:Six degrees of separation

1.8:Satisfactory map colorings

1.9:First to fail: Weibull

1.10:Emergence

1.11:Emergent vs. fundamental

1.12:Self-propelled particles

1.13:The birthday problem

1.14:Width of the height distribution

1.15:Fisher information and Cramér–Rao

1.16:Distances in probability space

Random walks and emergent properties

2.1:Random walk examples: universality and scale invariance

2.2:The diffusion equation

2.3:Currents and external forces

2.4:Solving the diffusion equation

Temperature and equilibrium

3.1:The microcanonical ensemble

3.2:The microcanonical ideal gas

3.3:What is temperature?

3.4:Pressure and chemical potential

3.5:Entropy, the ideal gas, and phase-space refinements

Phase-space dynamics and ergodicity

4.1:Liouville's theorem

4.2:Ergodicity

Entropy

5.1:Entropy as irreversibility: engines and the heat death of the Universe

5.2:Entropy as disorder

5.3:Entropy as ignorance: information and memory

Free energies

6.1:The canonical ensemble

6.2:Uncoupled systems and canonical ensembles

6.3:Grand canonical ensemble

6.4:What is thermodynamics?

6.5:Mechanics: friction and fluctuations

6.6:Chemical equilibrium and reaction rates

6.7:Free energy density for the ideal gas

Quantum statistical mechanics

7.1:Mixed states and density matrices

7.2:Quantum harmonic oscillator

7.3:Bose and Fermi statistics

7.4:Non-interacting bosons and fermions

7.5:Maxwell–Boltzmann 'quantum' statistics

7.6:Black-body radiation and Bose condensation

7.7:Metals and the Fermi gas

Calculation and computation

8.1:The Ising model

8.2:Markov chains

8.3:What is a phase? Perturbation theory

Order parameters, broken symmetry, and topology

9.1:Identify the broken symmetry

9.2:Define the order parameter

9.3:Examine the elementary excitations

9.4:Classify the topological defects

Correlations, response, and dissipation

- 10.1: Correlation functions: motivation
- 10.2: Experimental probes of correlations
- 10.3: Equal-time correlations in the ideal gas
- 10.4: Onsager's regression hypothesis and time correlations
- 10.5: Susceptibility and linear response
- 10.6: Dissipation and the imaginary part
- 10.7: Static susceptibility
- 10.8: The fluctuation-dissipation theorem
- 10.9: Causality and Kramers-Krönig

Abrupt phase transitions

- 11.1: Stable and metastable phases
- 11.2: Maxwell construction
- 11.3: Nucleation: critical droplet theory
- 11.4: Morphology of abrupt transitions

Continuous phase transitions

- 12.1: Universality
- 12.2: Scale invariance
- 12.3: Examples of critical points

A Appendix: Fourier methods

- A.1: Fourier conventions
- A.2: Derivatives, convolutions, and correlations
- A.3: Fourier methods and function space
- A.4: Fourier and translational symmetry
