

Table of Contents

1	Introduction	1
I	Fundamentals	3
2	Probability	5
3	Statistics	63
4	Graphical models	143
5	Information theory	217
6	Optimization	255
II	Inference	337
7	Inference algorithms: an overview	339
8	Gaussian filtering and smoothing	353
9	Message passing algorithms	395
10	Variational inference	433
11	Monte Carlo methods	477
12	Markov chain Monte Carlo	493
13	Sequential Monte Carlo	537
III	Prediction	567
14	Predictive models: an overview	569
15	Generalized linear models	583
16	Deep neural networks	623
17	Bayesian neural networks	639
18	Gaussian processes	673
19	Beyond the iid assumption	727
IV	Generation	763
20	Generative models: an overview	765
21	Variational autoencoders	781
22	Autoregressive models	811
23	Normalizing flows	819
24	Energy-based models	839
25	Diffusion models	857
26	Generative adversarial networks	883
V	Discovery	915
27	Discovery methods: an overview	917
28	Latent factor models	919
29	State-space models	969
30	Graph learning	1031
31	Nonparametric Bayesian models	1035
32	Representation learning	1037

33 Interpretability 1061

VI Action 1091

34 Decision making under uncertainty 1093

35 Reinforcement learning 1133

36 Causality 1171
