

Table of Contents

Part I. Fundamentals:

- 1. Biological background;**
- 2. The fluid dynamics of microscopic locomotion;**
- 3. The waving sheet model;**
- 4. The squirmer model**

Part II. Cellular locomotion:

- 5. Flagella and the physics of viscous propulsion;**
- 6. Hydrodynamics of slender filaments;**
- 7. Waving of eukaryotic flagella;**
- 8. Rotation of bacterial flagellar filaments;**
- 9. Flows and stresses induced by cells**

Part III. Interactions:

- 10. Swimming cells in flows;**
- 11. Self-propulsion and surfaces;**
- 12. Hydrodynamic synchronisation;**
- 13. Diffusion and noisy swimming;**
- 14. Hydrodynamics of collective locomotion;**
- 15. Locomotion and transport in complex fluids**
