
Table of Contents

Part One: Network Motifs

Chapter 1. Transcription Networks basic concepts

Chapter 2. Autoregulation

Chapter 3. The Feed Forward Loop

Chapter 4. Temporal Programs and the Global Structure of Transcription Networks

Chapter 5. Positive Feedback, Bistability and Memory

Chapter 6. How to Build a Biological Oscillator

Part Two: Robustness

Chapter 7. Kinetic Proofreading and Conformational Proofreading

Chapter 8. Robust Signalling

Chapter 9. Chemotaxis

Chapter 10. Fold-change Detection

Chapter 11. Dynamical Compensation and Mutual Resistance in Tissues

Chapter 12. Robust Spatial Patterning in Development.

Part Three: Optimality

Chapter 13. Optimal Gene Circuit Design

Chapter 14. Multi-objective Optimality in Biology

Chapter 15. Modularity
