<title>Impact of lockdown on the mining industry in India</title>
<description><h3 class="a-plus-plus">Abstract</h3> <p class="a-plus-plus">Mining is an essential industry that will provide key materials needed for India infrastructure development. Mining is one of the core sectors and growth driver of Indian economy. Minerals and ores provide basic raw materials to many important industries like power generation (thermal), iron and steel, cement, petroleum and natural gas, petrochemicals, fertilizers, precious and semi-precious metals/stones for Jewellery, electrical and electronics equipments, glass, ceramics, etc. The mining sector in India was poised for robust growth in financial year 2020-2021, on the back of rising demand from end-use sectors and fresh investments announced by the mining companies. However, the spread of COVID-19, right at the beginning of the financial year, has led to disruptions across industries. There is a significant scope for new mining capacities in iron ore, bauxite, coal and other minerals and considerable opportunities for future discoveries of sub-surface deposits. Infrastructure projects continue to provide lucrative business opportunities for steel, zinc and aluminium producers. Iron and steel make up a core component for the real estate sector. Demand for these metals is set to continue given strong

Abstract (9)

Kawasaki disease (KD), an enigmatic medium vessel vasculitis, presents as an acute febrile illness predominantly affecting young children. KD appears to be a hyper-inflammatory response elicited by environmental or infectious agents (including respiratory viruses) in genetically predisposed individuals. Numerous reports from the current era of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) pandemic have described the occurrence of KD/KD-like illness in close temporal proximity to SARS-CoV-2 infection or exposure. Notably, KD has been reported in association with H₂N₂-pdm09 virus that caused the previous pandemic a decade ago. Non-H₂N₂ influenza infections as well as influenza vaccination have also been reported to trigger KD. Herein, we report a case of H₂N₂-pdm09 influenza who developed KD. We review the published literature on influenza infection or vaccination triggering KD. This may help in a better understanding of the KD/KD-like illness associated with SARS-CoV-2. Besides, we also evaluate the safety of aspirin in influenza-triggered KD as aspirin administration in children with influenza is associated with the risk of development of Reye syndrome.

Introduction (10)

Kawasaki disease (KD) is an acute febrile vasculitic disorder of childhood predominantly affecting medium size arteries with a predilection for coronary arteries. KD is now the leading cause of acquired heart disease in children worldwide [1]. The illness was first reported by Dr. Tomisaku Kawasaki, a Japanese pediatrician, in 1967 when he reported a series of 50 patients [2]. Classic or 'complete' KD clinically presents with fever for at least 5 days with four of the following clinical manifestations: edema of hands and feet in the acute stage and/or subacute

Clinical Rheumatology (1)
Journal of the International League of Associations for Rheumatology

(2) Editorial board **(3)** Aims & scope **(4)** Journal updates

Clinical Rheumatology is an international English-language journal devoted to publishing original **(5)** clinical investigation and research in the general field of rheumatology with accent on clinical aspects at postgraduate level.

The journal succeeds Acta Rheumatologica Belgica, originally founded in 1945 as the official journal of the Belgian Rheumatology Society. Clinical Rheumatology aims to cover all modern trends in clinical and experimental research as well as the management and evaluation of diagnostic and treatment procedures connected with the inflammatory, immunologic, metabolic, genetic and degenerative soft and hard connective tissue diseases. — [show all](#)

Introduction

圖書簡介

This book offers a comprehensive overview of Chinese medicine terminology translation, defining the most central concepts in Chinese traditional medicine, providing simplified Chinese characters, Mandarin Pronunciation in pinyin, citations for 111 of the most key concepts in traditional Chinese medicine and culture. Covering definitions of terms relating to essence, qi, yin-yang theory, five elements and visceral manifestation in traditional medicine, it offers a selection of English versions of each term in addition to a standard English version, drawing on the translation history of traditional Chinese medicine. It provides a useful resource to understand the fundamental terms of traditional Chinese medicine and culture in Chinese and English, and their relevance to cross-cultural discourse.

Abstract (8)

Preoperative preparation, especially bowel preparation, is a routine procedure before colorectal examinations and surgeries. Bowel preparation aims to clean the bowel and facilitate surgeries. With the popularization of Enhanced Recovery After Surgery (ERAS), the contents of preoperative preparation are constantly adjusted and improved. However, due to the particularity in the surgical procedures of NOSES, preoperative preparation is still vitally important. It involves many aspects including bowel preparation, vaginal preparation for females, and psychological preparation for patients. The most satisfactory surgical effects cannot be achieved without a comprehensive preoperative preparation.

[Download chapter PDF](#) (9)

1 Bowel Preparation (10)

There are significant differences between NOSES and conventional laparoscopic surgery in terms of specimen extraction and digestive reconstruction. Aseptic techniques are involved in many operations of NOSES, so bowel preparation is strictly required. If the preoperative bowel preparation is not adequate, the intestinal contents may leak into the abdominal cavity,
